Key features of AutoCAD include 2D and 3D drafting, 2D drafting (e.g., line, area, ellipse, polyline, polygon, and arc), 2D drafting (e.g., polygon, arc, circle), 3D modeling (e.g., surfaces, volume, solid, wireframe, dimension, and constraints), object (e.g., arrow, cube, cylinder, design, extrude, freeze, edit, extract, fillet, fit, flip, graft, group, grip, guide, icon, inset, interpolate, joint, line, move, project, retract, select, spline, surface, text, translate, and trim), text (e.g., font, font style, letter format, text, text style, and text tool), 3D printing (e.g., supports, holder, gantry, and laser), and virtual reality (e.g., VRML, OBJ, and STL). AutoCAD is licensed for business use or free for personal use. AutoCAD is part of the Autodesk Personal Suite, which also includes AutoCAD LT (an update of AutoCAD for students and hobbyists), AutoCAD 2010, AutoCAD R20, and other Autodesk software. AutoCAD is also available on iOS, Android, and Blackberry platforms. AutoCAD or AutoCAD LT can be purchased individually or as part of a subscription. What is AutoCAD? AutoCAD is a commercial computer-aided design (CAD) software application that was developed by Autodesk in 1982. Autodesk introduced AutoCAD (pronounced "aut-oh-cad") on November 30, 1982 as a desktop application running on microcomputers with internal graphics controllers. Before AutoCAD was introduced, most commercial CAD programs ran on mainframe computers or minicomputers, with each CAD operator (user) working at a separate graphics terminal. With AutoCAD, users are able to draw and edit two- and three-dimensional (2D and 3D) objects, edit 2D graphics, and convert imported drawings into other formats. AutoCAD also enables users to create 2D and 3D drawings, including hatch patterns and shading, and convert imported drawings into standard formats such as AutoCAD or DWG. AutoCAD can also export vector and raster drawings to

3rd Place Finalist In the race towards the 3rd Place Finalist prize we've seen some impressive designs for an ashtray that won first prize in the 15th Place finalist challenge. It was the grand-daddy of the bunch: Keegan engineered a cooling unit from scratch for the OUDT. She discovered that the base of the assembly required a good cooling device. As you can see in the picture above, she positioned the pump in the base of the assembly and connected it to a small heat sink. She chose to use a series of horizontal fins along the bottom of the silo and covered the fins with a plastic dust lid to make it work even more as an ashtray. At first she thought the bottom might work fine on its own. She then devised a way to make the bottom lighter, and to avoid getting coffee all over the cover. She had an interesting way of cooling it. This gave her the advantage of being able to wash the silo any time she wanted. Keegan decided to use a self-standing wire and glass bowl to hold her coffee and tea. It looked very pleasing to her. The silo presented problems. After testing multiple mounts for it, she finally decided to cut a piece of wood to hang it from the wall. This went together quite nicely. As the first contestant in the race towards 3rd Place Finalist, Keegan's silo took first place in the 15th Place finalist challenge. The race continues until the winner is announced on Tuesday, August 8th, 2010. Sterling Pharmaceutical, a company that creates medicinal marijuana products, announced last month it would open its first dispensary in Florida, in Tampa. But after a June 25 blaze damaged the dispensary and killed a Tampa Police officer, Sterling Pharmaceutical and its founder have both decided to close.
